# Group time

Before exploring the awesome activities planned for today, the children joined Miss Caitlin on the mat to read a book 'Tickly octopus'. The children instantly remembered the book from yesterday and pointed straight to the octopus in our room.

After reading the book Miss Caitlin asked the children what the book was about which Kai-Li responded "octopus". We discussed what we remembered from the book and which were our favourite parts. Joanne mentioned her favourite part was the tickling part so Miss Caitlin went around the room and gave everyone a tickle.

The children then joined Miss Caitlin in getting their counting fingers ready and practiced their counting, they counted all the way to 10 and backwards from 10. the children are all becoming very confident in counting to and from 10 which is great to see.

# Science experiment

Welcome to our science Lab!

The children were all super excited to join Miss Caitlin at the table to do this awesome science experiment. Miss Caitlin had frozen some sea animals for the children to try and free using salt and warm water. The children all had an absolute blast as they freed multiple sea animals from the ice including an eel, shark, whale and turtle.

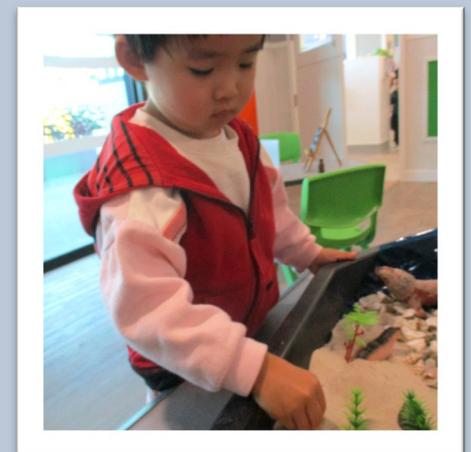

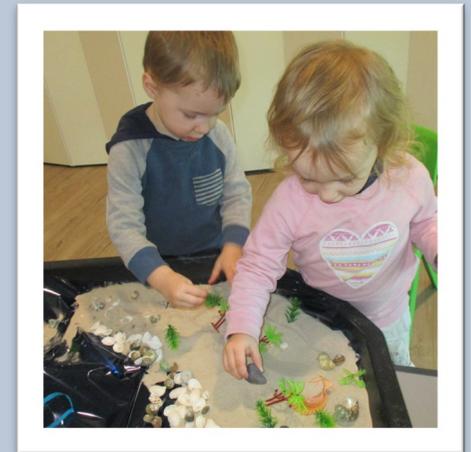

Just when we thought the activity couldn't get any more interesting Jade returned to the table with a micrifying glass trying to see what animals were left in the ice. This was super interesting as Kai-Li then wanted a turn seeing what she could see using the micrifying glass.

# Sensory tray

As you may know, our theme in the Dolphin's room for this week has been 'Under the Sea'. As we have been completing lots of different art work and will continue to do so over the course of the next couple of weeks, Miss Caitlin decided to set up a sensory experience for the children to enjoy.

Miss Caitlin created a mini beach/ ocean for the children to let their imagination run wild. We had sea shells hidden within the sand, boats floating on the water, seaweed throughout the water and different sea creatures spread across the sand and sea. Joanne noticed that the sea shells had empty middles so she decided to fill them with sand, Cooper filled the boats with sand to see if they would still float, Kai-Li used the magnifying glass to inspect the sand closely and Adaline wanted to see if the sand looked better on the floor.

Everyone had so much fun exploring the tray and finding lots of different treasures. We can't wait to find more activities that the children will enjoy this much.

# Analysis of learning

Learning Outcomes Achieved:

1.1, 1.2, 1.4, 2.4, 3.1, 3.2, 4.1,  
4.2, 4.3, 5.1

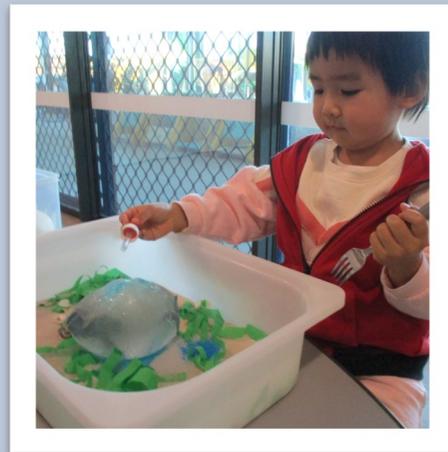

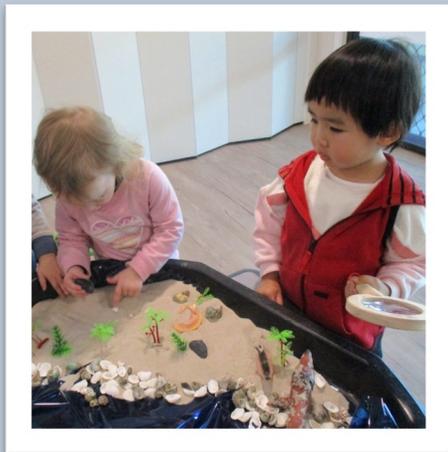

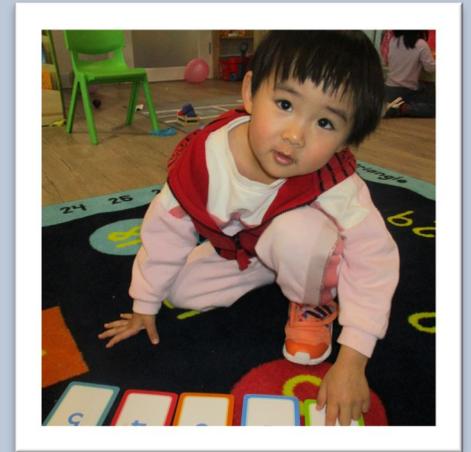

# Reflection of the day

Happy Thursday! We had so much fun exploring our topic of 'Under the Sea'. We saw what salt and warm water does to ice, we explored the sea through sensory play and we received lots of love and cuddles from our educators. Just a friendly reminder that tomorrow is Pajama Day for those who attend on Fridays. Come dressed in your best PJ's!
